## Easy to use and easy to deploy... The **CONNECTED724** enterprise grade SIP telephones have the best warranty in the business!

Want a set that people find easy to use with lots of one touch functionality? Then test drive one of our **CONNECTED724** business grade SIP telephones. We offer a suite of SIP endpoint phones including our 1 & 2 line display desk sets detailed below.

Both the AQ102N & the HL202N sport easy to read backlit displays with one touch keys for speed dial or for access to a wide variety of PBX features.

We are so proud of our sturdy phones we provide a full 2 Year "Advance Replacement Warranty". Most SIP phone manufacturers don't provide advance replacement and only provide one year of coverage.

Both of these sets have been tested and "approved" for use by AVAYA and Nortel on many of their enterprise platforms. They have also been successfully tested in our multi million dollar test labs in Dallas TX on many popular Asterisk based platforms like Critical Links. These phones work on systems that utilize industry standard SIP protocol. Please give us a call with any compatibility questions and we will be happy to assist.

### AQ102N 1Line SIP Display Telephone

The **CONNECTED724** G-tek series AQ102N is a next generation, cost-effective, enterprise-grade SIP phone for use on SOHO, SMB, enterprise, and service provider SIP-compatible VoIP networks. Wall mount or desk it features a high quality speakerphone and 2x16 backlit display. The 10 programmable one touch buttons can be used for speed dialing or access to a wide variety of PBX features. Menu navigation keys give users access to additional features like 80 number phone book and incoming and outgoing call history. Dual 10/100 ethernet ports allow for WAN & LAN connections as well as optional automated firmware updates. The AQ102N can be AC or PoE powered (AC power is ordered separately).

The AQ102N can simultaneously connect to up to 3 SIP-compatible VoIP networks, domains or service providers. This allows the set to be an extension off up to 3 IP PBX's at the same time. The multiple domain feature provides redundancy beyond the domain/DNS, delivering a resilient desktop phone that is survivable to 2 or 3 networks. This provides network 'Survivability' beyond the network and redundancy to the desktop.

### HL202N 2Line SIP Display Telephone

The **CONNECTED724** G-tek series HL202N 2 line set features a full-duplex speakerphone for superior audio quality and 16 programmable one touch buttons with 3 color LED. These "one touch" buttons can be used as autodial or BLF/DSS keys which allow users to see the presence/status of coworkers. Depending on the type of platform buttons may be configured as additional line appearances. Four contact sensitive menu navigation buttons give users access to additional features like phone book and incoming and outgoing call history. Also included is a high quality large 64X132 graphic backlit display. Dual 10/100 ethernet ports allow for WAN & LAN connections as well as optional automated firmware updates. The HL202N can be AC or PoE powered and operates on most industry standard SIP enabled systems.

The HL202N can simultaneously connect to 10 SIP-compatible VoIP networks/domains/service providers at any time providing redundancy beyond the domain/DNS, delivering a resilient desktop phone that is survivable from 2 to 10 networks if desired. The phone includes a headset jack and can be AC powered locally or powered via PoE (Power over Ethernet) switches/routers. (AC power is ordered separately)
